Hi,

There is an error in RPC server shown here:

[http://ultimatepp.org/reference\\$MtRpcServer\\$en-us.html](http://ultimatepp.org/reference$MtRpcServer$en-us.html)

Take a look at mutex usage:

```
void Process(int n)
{
    INTERLOCKED { LOG("Process " << n << " started"); }
    Mutex accept_mutex;

    for(;;)
    {
        TcpSocket http;
        accept_mutex.Enter();
        [...]
        bool b = http.Accept(rpc);
    }
}
```

This mutex should allow only one thread to enter Accept method at a time.

But since every thread has its own mutex instance, it doesn't do its job and all threads stuck not on Enter(), but inside http.Accept().

"Mutex accept_mutex" should either be part of MtRpcServer class or be static.
