Hi zhdzhv,

Welcome to the forum 8)

zhdzhv wrote on Fri, 20 January 2017 14:28 I'm trying to use standalone msvc2015 toolchain without visual studio itself, and before running cl.exe or any other build tool I have to set PATH variable properly.

Are you sure it is not enough to set the path in the build method? See Setup > Build methods > "PATH - executable directories". You can insert new director using a right click in this pane and selecting Append row. I think this should be just what you need ;)

Also, isn't MSVC2015 supported by the autoseup tool? This is actually question for someone else to answer, as I'm not a windows user :)

Best regards,  
Honza
