Klugier wrote on Fri, 20 January 2017 21:27Hello,

So, if GCC supports #pragma push, pop should we have following code now (Used several times in bmphdr.h!):

```
#ifdef COMPILER_GCC
__attribute__((packed))
#endif
```

I think it could be redundant, but I am not sure - so I am waiting for your opinion.

Sincerely,  
Klugier

Not sure. In these matters all I can say: if it does work, do not break it.

Perhaps some compiler version has attribute working and pack pragma not. Or vice versa. Current MINGW certainly has attribute broken...
