Subject: Re: Huge error of Postgresql! Double fields by transmission to the program
lose a fractional part!

I really wonder what U++ revision you are using, because in trunk it is:

void PostgreSQLConnection::GetColumn(int i, Ref f) const
{
 if(PQgetisnull(result, fetched_row, i))
 {
  f = Null;
  return;
 }
 char *s = PQgetvalue(result, fetched_row, i);
 switch(info[i].type)
 {
  case INT64_V:
   f.SetValue(ScanInt64(s));
   break;
  case INT_V:
   f.SetValue(atoi(s));
   break;
  case DOUBLE_V:
   f.SetValue(atof(s));
   break;

and it is really really unlikely that this bug could get there in last 8 years, because in that period
my major project is PGSQL and customers would really notice this within hours...

I have checked svn history and oldest revision available from 2009 has "atof" there...
