Hi Honza, thanks for your reply.

Yes, your explanation makes it a bit clearer for me, thanks :)
Maybe you could add all those little, Upp specific things in the documentations some day? ;)

As for the member function... I've tried your code, but it won't work.
Tried some other things too, but still won't compile.
Maybe you know a solution?

Here's some code I tried and the resulting errors:
Register("GetClients", THISBACK(GetClients));
test.cpp (70): error C2664: "void Upp::Register(const char *,void (__cdecl *)(Upp::RpcData &),const char *)" : Konvertierung von Argument 2 von "Upp::Event<Upp::RpcData &>" in "void (__cdecl *)(Upp::RpcData &)" nicht möglich

Register("GetClients", GetClients);
test.cpp (70): error C3867: "Test::GetClients": Keine Standardsyntax; "&" zum Erstellen eines Verweises auf das Member verwenden

Register("GetClients", &GetClients);
test.cpp (70): error C2276: "&": Ungültige Operation auf Ausdruck einer gebundenen Memberfunktion

Any solutions?
Thanks :)
