NilaT wrote on Sun, 05 February 2017 22:00Wow, thanks for your input.
Still very new terrain for me.
I understand the part with global variables...
Not sure about that Single-part though. Is this some kind of static?

Single represents singleton pattern, single global instance of class.

And Lambda is completely new to me... Didn't understand a thing here but as long as it works I'm kinda happy ;)

And mirek yes, it's going to be MT. Like the MtRpcServer.

Well, then you have sort of different issue to resolve, Single is not good enough there... You will rather need one DB connection per thread.
