Hi-

Is it possible that the version of firebird in the bazaar is not compatible with the version I am using from fedora repo. For i.e., If I am using 2.5.x does that create problems? I am thinking files could change like headers and libraries between versions. Please let me know if that is a possibility. My version of firebird is V2.5.5.26952 Firebird 2.5

thx.-
