Subject: Re: PrinterDlg changes defaultprinter on Linux
Posted by Alboni on Tue, 07 Mar 2017 02:16:34 GMT

Ah, sorry it seems I didn't quote the original code.
It is
Vector<String> l = Split(System("lpoptions -l -d " + String(~printer)), '\n');
that seems to first list the options and then change the defaultprinter.
Not correct I think as you get the options of the previous printer.
If I change it like I wrote in the first message then it works correctly but still changes the default printer when used.
the -p works ok on the commandline but then the dialog doesn't return the correct printer as it seems to rely on changing the default printer.
