Hello all

I wanted to assign a Function from a subclass but compiler complains with error:

'&': illegal operation on bound member function expression

What have I to do?

```
class FuncSource {
protected:
 Function <double(double)> function;

public:
 FuncSource(Function <double(double)> function) : function(function) {}
 double f(double x) {return function(x);}
};

class MySource : public FuncSource {
public:
 MySource(double data) : FuncSource(&Calc), data(data) {}  // COMPILER ERROR

 double Calc(double x) {return x + data/10;}

private:
 double data;
};
```
