Hello all

I wanted to assign a Function from a subclass but compiler complains with error:

'&': illegal operation on bound member function expression

What have I to do?

```
class FuncSource {
```

```
protected:
```

```
    Function <double(double)> function;
```

```
public:
```

```
    FuncSource(Function <double(double)> function) : function(function) {}
```

```
    double f(double x) {return function(x);}
};
```

```
class MySource : public FuncSource {
```

```
public:
```

```
    MySource(double data) : FuncSource(&Calc), data(data) {} // COMPILER ERROR
```

```
    double Calc(double x) {return x + data/10;}
};
```

```
private:
```

```
    double data;
```

```
};
```
