Hello all

I wanted to assign a Function from a subclass but compiler complains with error:

'&': illegal operation on bound member function expression

What have I to do?

```
class FuncSource {  
protected:  
    Function <double(double)> function;  
  
public:  
    FuncSource(Function <double(double)> function) : function(function) {}  
    double f(double x) {return function(x);}  
};
```

```
class MySource : public FuncSource {
```

```
public:  
    MySource(double data) : FuncSource(&Calc), data(data) {} // COMPILER ERROR
```

```
    double Calc(double x) {return x + data/10;}
```

```
private:
```

```
    double data;  
};
```
