Subject: GridCtrl mouse click problem (Closed)

I have a TopWindow that will call a child TopWindow with a GridCtrl inside. When I open the child window sometimes the left mouse button does not respond, I can only use the mouse right click to select the row, the mouse left click does not respond. This may happen randomly. When I close and re-open the child window again, the left mouse work again. Does anyone has this problem and has some solution. Thanks

Danny
