Hi,

the call to
windres = GetHostPathShort(fullpath);
is supposed to convert
C:\u pp\bin/mingw64/64/bin/windres.exe
to
C:\UPP~1\bin/mingw64/64/bin/windres.exe

and it work like that for me.

can you look inside GetHostPathShort (breakpoint for example) and verify why it fail ?
