Sorry, don't have one for 15. I attached the 14 one, don't know if it will help.

But I never bothered with BM files.

I use the build method navigator and if I point TheIDE in the right direction, I can make it work with any version, probably VS2017 to.

Try something like:
c:/program files (x86)/microsoft visual studio 15.0/
c:/program files (x86)/windows kits/10/lib/

Basically the latest version of VS and Windows Kits.

I have my own detection code, so I guess I need to update it for VS2017.
