Hi cbporter

Thank you for your file.

Now I have generated MSC17.bm file.

But one strange thing happening.

if Builder name not available in dropdown of build methods it gives invalid builder.  
So I selected MSC15X64. All other relevant files for VS2017 selected. It is working.

If I select Builder without x64 then it is giving linking error.

Any Builder with X64 Linking is working. I want to build for 64 bit system.

BUILDER selected from dropdown is changing some flag for linking.

BUILDER = "MSC15X64";

My working MSC17.bm

Any suggestions for the options in .bm file
