Subject: Linux dual monitor: Not showing a TopWindow on the task bar Posted by Alboni on Mon, 24 Apr 2017 15:39:09 GMT

My point of sale software Kassa uses a second monitor to display a client receipt screen. I am using two main screens for that. The client screen is full screen. (linux Mint 17.3 64 bit KDE flavour)

```
void DoMain()
{
  KassaAppWindow app(&session);
  One<KassaClientScreen> clientscreen;
#ifdef PLATFORM_LINUX
  app.OpenMain();
#endif
  if (KassaSettings::UseClientScreen())
  {
    clientscreen.Create();
#ifdef PLATFORM_LINUX
    clientscreen->OpenMain();
#endif
  }
  Ctrl::EventLoop();
}
```

The above works both on Linux and Windows, however on Linux the client screen also shows on the task bar. That creates confusion and not useful for a full screen display. Is there a way to not show it on the task bar? Note that on Linux I need to Call OpenMain() on the client screen or it won't show at all. On Windows calling OpenMain will freeze the program.
