Some people started using UWord for website creations..

So, I'm asking on their behalf.

How to insert and display *.png files in UWord and/or qtf?

1. case:

from upp web info:

@ @format:cx&cy

something like

[@ @image:cx&cy ...]

[@ @file:cx&cy ...]?

2. case:

or directly as hyperlink possible?

Thanks.

P.S. Not just Paste as sequence of bits but to save space for many insertions...
