Hi,

Is it possible to add this function:

```
void Zero() { if(bp) Fill(bp, bp + alloc, (dword)0);}
```

It allows the reuse of a reserved object.

And if possible ToString (I doubt of it's portability in BIG ENDIAN)

```
String Bits::ToString() const
{
    String ss;
    for(int i = alloc-1; i >= 0; i--)
        ss << FormatIntHex(bp[i]);
    return ss;
}
```
