Hello,

At the first spot I see that you have not connected CtrlCore to your package - can you do this? You can do this by "Add package operation" and select CtrlCore - if it will not be available it will mean that uppsrc nest is wrongly configured.

I was talking about this window:

But the two above screen-shots are perfect. Especially the one where there is no CtrlCore connected (Ss2.jpg :)

Can you also post .upp package related file. This will help to define what's really happend - it would be good to have the versions where it works and where it is not. The .upp is TheIDE package file and can be found in package directory.

Sincerely,
Klugier
