Subject: [SQLITE] Search accents insensitive
Posted by jibe on Thu, 01 Jun 2017 13:25:37 GMT

Hi,

I need to select records without sensivity to the case and accents : the SELECT query should return
Jeremy
Jérémy
JEREMY
JÉRÉMY
etc.

But as far as I know, with SQLITE, we have to create a special collation function, which does not works with LIKE, so we have also to create a special LIKE function.

Does somebody already created those functions ?

If not, I'm not very sure to be able to do that in U++ without (maybe a lot of) help... Any suggestion ?

A workaround would be to duplicate the column and fill the second with upper case text without accent, but it is not very elegant !
