Hello !

OK it's works fine ! I 'm using TheIDE version 9251 (64 bit) under Windows 7.

Just before using TheIDE i used old version of Eclipse. And i created software for a lot of system like Nintendo DS, PIC microcontroller... I used Ant task to create scripts to compile and make packages.

Can you add the Ant scripts to TheIDE ? And... But i know it's not easy, can you add auto-completion for Java to TheIDE ?

Your IDE is very good ! Thank you !
