Hi, Honza,

Thanks for your reply, but did you noticed well that I am working with SQLITE and that I mentioned
Quote:But as far as I know, with SQLITE, we have to create a special collation function, which does not works with LIKE, so we have also to create a special LIKE function.

Is it what you mean when you say
Quote:But you'll still need to write the code to strip the accents.

My problem is that I don't know exactly what to do, how to write this special collation function inside the SQLITE code and how to modify the LIKE funtion to use it...

As I think that this problem is frequent and has probably already been solved by somebody, my question was more especially about an already existing solution for SQLITE...

I forgot to say : trying your code, Honza, I got the error "no such function: normalize"
