08:05zsolt wrote on Wed, 23 August 2006 02:23I'm using it to store 32 bit integers, but you can store anything in Value. See this page:

[http://upp.sourceforge.net/srcdoc\\$Core\\$UserValue\\$en-us.html](http://upp.sourceforge.net/srcdoc$Core$UserValue$en-us.html)

it's a little hard to understand

Please, post your minimal code sample.

sorry,not ready yet,I used LPARA to store database record id in my MFC code,so I would to do the same thing in U++,but I found U++ TreeCtrl doesn't have such kind of variable.

btw,after I played with U++ a day,I really like it now,I create a simple GUI,build with MingW,optimized for size,upx the exe file,finally the size is 537kb.attach is the screenshot

if I didn't try,I never know U++ is so good!!!
