Hello,

What about small helper functions in the code?

```
void HighlightSetup::DefaultHIStyles()
{
    if(IsDark(SColorPaper()))
        InitDarkHIStyles();
    else
        InitDefaultHIStyles();
}
```

Where "Init..." functions could be private class methods or static functions inside .cpp file. In my opinion this will give us better code readability.

Sincerely,
Klugier
