Just one question, why "Select" inside C++ source has SQL highlight colour? Is it some bug, or inherent design of current parser and impossible to fix in simple way?

It is by design - function names that match U++ SqlExp are highlighted. I do not really like it, but it was pushed on me years ago. In default 'white' highlighting, colors are set to the normal ink (so no highlighting).

I guess it should be the same for dark theme. Going to fix it...
