Hello ptkacz,

For GUI, select GUI from the "App style" options.

For X11, simply select the NOGTK option.

For any other -custom- flag you'd like to activate, you can type it into "Other flags" section,

For example, you can explicitly specify X11 flag (instead of using NOGTK option) by typing X11 into "Other flags" section too.

Best regards,

Oblivion
