Hi,

The files I uploaded are just the ones my U++ installation have auto-created on my platform. I wouldn't necessarily expect them to work on your system without modification. I just uploaded them for you as a template. If you find similar paths on your system, you can then tune these files accordingly to match your system configuration.

I have no knowledge of the automatic build method generation, so I cannot help on that part. Certainly having unusual installation paths can affect such code.

The reference to x86 in the PATH does not appear to cause any trouble on my 64-bit system. The reason for it is unknown to me.

I wish you the best of luck!

Best regards,

Tom
