As for problems with chinese glyphs in TheIDE - well, what is the situation with "monospace" fonts for glyphs?

TheIDE's LineEdit expects characters to be monospace and fit within monospace "cells".

Alternatively, perhaps you could post me some text in utf-8 chinese and perhaps the font you are using for it. (I know nothing about chinese and I do not in fact have any method how to try to enter chinese glyphs in TheIDE
