hojtsy wrote on Wed, 04 January 2006 15:49I have subscribed to several topics, but I don't get the notification messages when new messages are posted. I checked my User Control Panel: email notifications are enabled. My email address is correctly entered, because I got the initial registration confirmation message. It's not because of my spam filter, that just puts the suspected spam into an other folder. Is it a server problem?

when you are logged in and go to "Private Messaging" and the "Subscriptions" can you see anything useful?
