cbpporter wrote on Sun, 03 September 2017 11:51 So I spent the weekend doing a basic port of our 3 executable project, both GUI and command line to Linux. There is still a lot of work to be done, but it works as a beta.

But how is the U++ support on Mac? I've never used Mac. Can you compile C++ on it? Does U++ GUI work? Do you need some sort of X port or something like CYGWIN? Is there a CYGMAC?

Do we have any Mac users?

AFAIK X11 is sort of integral part of MacOS (rest is BSD POSIX anyway).
