- Most importantly, thanks to your criticism, I ditched the future/promise mechanism completely, in favour of "Upp-native" way: Job instances are from now on basically simple data containers with referential access to their data (result). Yet I've kept the alternative return semantics. It is really useful.

That's interesting, because I actually suggested adding future/promise to U++ facilities...

Anyway, I might check it, but I do not see any archive / link posted.
