```
xml =  
"<html>"  
"<head><meta content=\"always\" name=\"referrer\"></head>"  
"<TITLE>A Midsummer Night's Dream</TITLE>"  
"</html>";
```

```
XmlParser p(xml);  
while(!p.IsTag())  
    p.Skip();  
p.PassTag("html");  
while(!p.End())  
    if(p.Tag("head"))  
    {  
        while(!p.End()) {  
            if(p.TagE("meta")) {  
                // crash here because "<meta" doesn't have ">"  
            }  
            else  
                p.Skip();  
        }  
    }  
}
```

```
if(p.Tag("TITLE")) {  
    String TITLE = p.ReadText();  
    LOG(TITLE);  
    p.PassEnd();  
}  
else  
    p.Skip();
```

the "<meta" in "<head>" doesn't have ">" so crashed
is there any way to skip "<head>"?
