luzr wrote on Wed, 23 August 2006 23:26 Sorry, at the moment we are not maintaining makefiles for dev version.

Generally, src downloaders should use the previous ide version to compile TheIDE.

If you do not have TheIDE capable of doing so, download mingw version (it is only 5 MB more, 1 minute on my connection), install and if you insist on single mingw on your machine, just delete then mingw folder....

Mirek

You are fast at responding. I will download it, and delete the MinGW. I don't mind more than 1 mingw, as long as they are different versions and placed in a good spot.

Cheers
