forlano wrote on Tue, 10 October 2017 19:24Hello,

I am trying to use the Gnu Scientific Library. I have found an example to apply what I need but they use even use the BOOST library.

I wonder if we U++ lovers have something equivalent to perform the same job.

The code that I want to replace is this

```
f_params &params= *reinterpret_cast<f_params *>(p);
```

inside the function f.

I am confused. 'reinterpret_cast' is C++ core language feature...
