Well, but that is general nature of linux, is it not? You cannot expect that binary built with different distro/version will work out of box.

(That said, personally I would probably prefer static linking of png too...)

Mirek

Yep, but the weird stuff is that libpng is the only library that brings problems, up to now.

Do you think it's possible to have it statically linked in some way ? Or... what about replacing with the source that is inside the png plugin, which is used for windows ?
