Quote:Unfortunately the Windows API in this case are cumbersome.

However if I click on the node/folder of the TreeCtrl the new file is displayed. So a sort of sync is performed. I would like to try to simulate the close/open of the node where the file is.

Unfortunately I do not understand how each node id map a given folder.

have you tried FindFile class of U++?

It can check timestamps (directory object change times).

[https://www.ultimatepp.org/src\\$Core\\$FindFile\\$en-us.html](https://www.ultimatepp.org/src$Core$FindFile$en-us.html)

Maybe you can "wait on" file/directory changes (manually, using a timer maybe?).

Best regards,

Oblivion
