luoganda wrote on Tue, 12 December 2017 11:59for c/c++ language usually set/get are needed
for properties,
using public_read section or flag would be useful for
properties, so there are not unneded code, eg:
class Class{
 public:
 //accessed and modifiable by any
 int someProp;
 //this would be non-modifiable in outer usage
 public_read:
 int somePropX;
 //or
 int public_read somePropX;
 public read int somePropX;
 //or something...
};
for compilers that would not implement this,
just "unsafe" public: would be used instead.
IDK, people are having these various ideas about properties, but I do not understand why. Is it
really so hard to write ()?
Also, with (writable) properties, one can do things like
a.ink = White;
a.font = Arial;
which IMO is really verbose and inconvenient compared to "U++ chained modifiers" style
a.Ink(White()).SetFont(Arial());
```
