DHCtrl(For tests i try to embed notepad on w7):

when switching topWindow to fullscreen,

is there an easy way to catch 'destroy' event before ctrl's child get's wiped out?

On fullscreen, there is WndDestroy and ::DestroyWindow(hwnd); get's called - which wipes out DHCtrl child - that is notepad.

There is NcDestroy, but it's called after that.

by the way, how to properly use DHCtrl:

just embed any 'external' window in internally created window by OpenHWND()?

it doesn't look good. If i cheat a little and use NcCreate(externalHwnd) it's better though.

In both cases there is only active mainUppWnd(Title) or externalEmbedded.
