Subject: found a solution in the interim - firebird
Posted by mtdew3q on Sun, 14 Jan 2018 19:25:43 GMT

Hi Novo and group-

I know C++ with Ultimate uses the language aggressively.
I like it though sometimes because the documentation is in the code.
However, Novo is very busy. I am not sure I am using his firebird correctly.

So, for the time being, I will use the new Soci 4.0 master branch.
I fired it up today, and it took very little time to install.
They had a ton of documentation and even a tip or two on google
to help me get the rest of the way.

I will check back periodically to see if anyone writes, but based on
how busy everyone is I am not sure if I can use firebird in bazaar.

It is not a show stopper for me. I can always use TK as a front end.
I just tinker with this stuff, and I think for the serious C++ person,
they will figure out Novo's firebird. I am probably doing it wrong.

Sorry, and thanks for being patient.

Thx. and have a cool rest of Jan.!-
