Hi Novo-

Please see test code below:

I tested this really quick except that I had to learn to check out a single file on git.  
Your code is working awesome.  
The code below prints out a list of countries from the employee.fdb sample db.

thx. so much!

Have a cool week,  
mtdew3q

```
FBSession s;  
s.Connect(  
    "/usr/local/firebird/examples/empbuild/employee.fdb",  
    "localhost",  
    "SYSDBA",  
    "masterkey"  
);  
  
    Sql stmt(s);  
    stmt.SetStatement(  
        " SELECT * from country"  
    );  
    stmt.Run();  
  
    while (stmt.Fetch())  
    {  
        Cout()<<stmt[0]<<"\n";  
    }
```
