Mirek's message #4924 "PocketPC conquered...."

I am happy to announce that the hard part of PocketPC support is finished - I was able to run most of "examples" on my PDA (interestingly, without any changes to the examples code, just compile&run).

Now of course, a lot of issues remains to be resolved, starting with right click emulation etc.... but the core work is already done.

Mirek

P.S.: Somebody to donate OSX capable PowerPC Mac?

gives cause to update my web site. So:

What is the current state of the Linux, UNIX, MacOS, ... portings?

Werner
