BTW, U++ Synchronize now supports GIT as well (since 2017.2)...

The general idea is perhaps somewhat different from what you would expect from "real GIT support" - the idea, just as with SVN synchronize, is to automate repetitive tasks (commit / push / pull).

Hi,

Yes, I know about this feature. It can be used for synchronization.

But I needed something, e.g. for basic resolving the conflict during the merge, ... To minimize the situation with switching to the CMD to resolve the simple GIT problems.
