luzr wrote on Sun, 27 August 2006 19:13- Windows is mature

- Most of Linux problems of past (e.g. printing or PdfDraw) are now resolved. (still missing is OpenGL support). FreeBSD is I believe the same thing.
- PocketPC is under development, I hope that next big release will be able to announce support
- MacOS is still in plans. With the current PocketPC experience, I dare to say that it will need no more than two months, however I do not think there will be MacOS in next release (unfortunately).

Mirek

Thanks a lot. I'll incorporate this into the next update of my web site.

Werner

P. S.:

Actually I expected the Linux, FreeBSD, etc. maintainers to answer. Are you doing all the stuff yourself?

Werner
