Hi guys,
thank you for your support but none of the solutions are working at the moment...

BioBytes wrote on Mon, 19 March 2018 11:57Hi Matteo,
Did you settle the "Main Package Organization" to GUI.MYSQLDLL. This can be done through the
TheIde main menu "Project"....

My current setting is GUY SSE2.MYSQLDLL. I tried to complile without SSE2 but the risult is the
same....

...When installing your application, libMySql.dll file must be copied in Windows\System32 directory
or in the same directory as the application exe file for dynamic linkage...

I copied the libMySql.dll in the Windows\System32 directory but nothing change...

It seems to me that the path in the lib directory is wrong: just try removing "debug" from the path.

I updated the path in the lib directory to:
"C:\Program Files\MySQL\MySQL Server 5.5\lib" but nothing change...

I always receive the same error message:

 (): Linking has failed
 ():
C:/upp/bin/mingw64/32/bin/../lib/gcc/i686-w64-mingw32/7.1.0/../../../../i686-w64-mingw32/bin/ld.ex
e: cannot find -lmysql
 (): collect2.exe: error: ld returned 1 exit status

something else to do??? :(

Regards,
Matteo
