luzr wrote on Mon, 28 August 2006 10:15: Another interesting aspect - it looks like ideograms are in fact "monospaced" - is this observation correct? Or most of them?

That would be great as I could save a lot of memory for character width storage

Mirek

yes, this is correct, for for CJK, using several bytes (normally 2) to index the ideograms, the ideograms are monospaced, such as 16*16 etc.

size.
