Using

EncodeRTF(Get());

as String EncodeRTF(const RichText& richtext... to save file,
while having for example 3 round bullets:

1st is ok, while

2nd/3rd has one extra space in it when viewing it,

while saving same file with GetQTF and opening it works as expected

And one more thing when viewing same qtf/rtf file with RichEdit,

qtf version has colored/underlined/modifiable links while rtf does not,

while exporting qtf to rtf and then opening rtf. Links are not preserved in the proses.

I don't know if this is a bug though.
