aftershock wrote on Mon, 30 April 2018 23:14Hi,

I have a class like this
class mainwindow : public DockWindow // public
{
virtual void DragAndDrop(Point p, PasteClip& d);
}

I have an application with docking.
Testing proved that DragAndDrop is not called...
Should it be called looking at examples?
What is the reason?
What would you do ?

Thanks.
Aftershock

Works for me

```
#include <CtrlLib/CtrlLib.h>
#include <Docking/Docking.h>

using namespace Upp;

struct MyApp : DockWindow {
    virtual void DragAndDrop(Point p, PasteClip& d) {
        if(AcceptFiles(d))
            PromptOK(Join(GetFiles(d), "&"));
    }
};

GUI_APP_MAIN
{
    MyApp().Run();
}
```

Providing testcase and more info (like what is HostOS / compiler) would help....
