Thanks,
It's now working fine. And as far as I can see Turtle is pretty impressive.
However I am more interested in this VirtualGui thing.
What is it really?
Will it allow me to create a remote desktop connection between U++ apps, and possibly with other
apps, e.g. via SSH? (Wtihout relying on X server, or HTMl5 canvas capable web browser)
That would be awesome.

Best regards,
Oblivion
