Quote:Hi,
I request the implementation of callback5.
Can you implement it?

Regards
A.

Hello Aftershock,

Callback is deprecated. Is there any reason for not using Function, Event, or Gate (the latter two are actually aliases for Function templates with specific return types (void and bool)) that can take any number of arguments? They are compatible with Callback, and superior.

E.g.

```
Event<int, int, int, int, int>    event; // returns void;  
Gate<int, int, int, int, int>    gate;  // returns bool;  
Function<T(int, int, int, int, int)> func; // returns type T;
```

Best regards,
Oblivion
