So you compiled your project using clang compiler in msc mode and using msc own linker.
I also tried it...with additional difficulties.
I have to modify these two files
Windows Kits\8.1\include\um\winsock2.h
Windows Kits\8.1\include\um\ws2tcpip.h.
They complained about some minor errors.
I attached patches.
And
compiler did not like _SCL_SECURE_NO_WARNINGS
So I had to make a command line argument filter that removes that text.
To be able to do that, I had to modify the msc builder within the ide.
Then it got up to linking.
